Series Overview

The Device is a layer-2 commercial switch. It has a high-performance switching engine and a large buffer memory to ensure smooth video stream transmission. With a full-metal and fanless design, the Device features great heat dissipation capability on the shell surface. The Device is an unmanaged switch, so it does not need to be configured through web interface, which simplifies installation.

Functions

Plug and Play
Hassle-free, it does not require any configuration. Simply use after it is powered on.

Wide Operating Temperature (−20 °C to +60 °C)
With its metal housing, it has great heat dissipation and a wide operating temperature that ranges from -20°C to +60°C.

Fanless Design
The fanless design reduces noise, enhances user experience, reduces mechanical losses and improves service life to a certain extent.

Optimized Performance
All ports can transmit streams at high speeds without delay.

All-Gigabit Ports
Designed with large buffer memory and all-Gigabit ports, enabling high-definition access of large stream.

Full Metal Design
With a full-metal design, the device is durable and has excellent heat dissipation performance, suitable for harsh environments.

Flexible Application
Suitable for use in a wide variety of scenes to meet your requirements.

Link Aggregation
Combines multiple physical links into one virtual channel for dynamic redundancy and load balancing, ensuring that the connection remains stable.

Port Isolation
Devices under different ports are prevented from communicating with each other, without need of VLAN being configured. Data is also protected from being leaked from the PoE ports and broadcast storms are isolated, making the network safe and easy to use.

Green Mode
This mode activates the Energy Efficient Ethernet (EEE) function to automatically shut down idle circuits, reduce power consumption and save energy.

Scene

Suitable for small-scale scenes such as offices, schools, hotels, supermarkets, and hospitals.
